

*Redwood National Park*

# ARE YOU BEING FILLED FULL OF SAWDUST?

You are being told that Redwood Parks will ruin the economy and put you out of work. You are being told that your future is in jeopardy because Redwood Parks will turn our county into a wasteland. You are being told that Redwood Industrialists will lose their timber lands to federal ownership. You are being told the Redwood Industry is "Saving the Redwoods" and doesn't need any outside help. Doesn't it seem odd that we only learned after the Redwood National Park was proposed of all the wonderful benefits the Redwood Companies have to offer and how they are really "Saving the Redwoods" and providing us with acre after acre of recreation land for us to use?

## SAWDUST IS PRETTY HARD TO SWALLOW!

## CONSIDER THE FOLLOWING--

1. There are 1,200,000 acres of private timber land in Humboldt County to provide yields of forest fibre in the future.
2. Thousands of acres (10, 15, 20?—only the timber industry really knows how much) of irreplaceable virgin redwoods disappear from the tax rolls annually at the increased rate of cutting currently under way.
3. Tourists don't destroy trees. They just look at them. Tourists spend money, lots of it around national parks especially. And somebody is providing service to these people—the recreation industry.
4. The lumber industry's use of trees destroys them; the recreation industry's use of trees preserves them and increases their value with use!
5. We have the only stands of virgin redwood forests in the world. Don't we have a moral obligation to preserve at least 2½% of these original stands?
