RELIGION

AS AFFECTED BY

MODERN MATERIALISM:

AN ADDRESS

DELIVERED IN

MANCHESTER NEW COLLEGE, LONDON,

AT THE OPENING OF ITS 89TH SESSION,

ON TUESDAY, OCT. 6TH, 1874.

BY

JAMES MARTINEAU, LL.D.

PRINCIPAL.

WILLIAMS AND NORRIS,

14, HENRIETTA STREET, COVENT GARDEN, LONDON;
AND 20, SOUTH FREDERICK STREET, EDINBURGH.

1874.

PREFACE.

THE following Address, published by desire of my College, was much curtailed in oral delivery. As somewhat more patience may be hoped for in a reader than in a hearer, it now appears in full. The position assumed in it, of resistance to some speculative tendencies of modern physical research, is far from congenial to me : for it seems to place me in the wrong camp. But the exclusive pretension, long set up by Theology, to dominate the whole field of knowledge, seems now to have simply passed over to the material Sciences ;— with the effect of inverting, rather than removing, a mischievous intellectual confusion, and shifting the darkness from outward Nature to Morals and Religion. I cannot admit that these are conquered provinces : and to re-affirm their independence, and protest against their absorption in a universal material empire, appears to me a pressing need alike for true philosophy and for the future of human character and society.

LONDON, Oct. 12, 1874.

RELIGION AS AFFECTED BY MODERN MATERIALISM.

THE College which places me here to-day professes to select and qualify suitable men for the Nonconformist Ministry; that is, the headship of societies voluntarily formed for the promotion of the Christian life. In carrying out its work, two rules have been invariably observed: (1) the Special Studies which deal with our sources of religious faith—whether in the scrutiny of nature or in the interpretation of sacred books—have been left open to the play of all new lights of thought and knowledge, and have promptly reflected every well-grounded intellectual change; and (2) the General Studies which give the balanced aptitudes of a cultivated mind have been made as extensive and thorough as the years at disposal would allow. In both these rules there is apparent an eager thirst for a right apprehension of things,—a contempt for the dangers of possible discovery, a persuasion that in the mind most large and luminous the springs of religion have the freshest and the fullest flow; together with the idea that the Preacher, instead of being the organ of a given theology, should himself, by the natural influence of mental superiority, pass to the front and take the lead in a regulated growth of opinion.

There have never been wanting prophets of ill who distrusted this method as rash. So much open air does not suit the closet divine; such liability to change disappoints the fixed idea of the partisan; and the "practical man" does not want his preacher's head made heavy with too much learning, or his faith attenuated in the vacuum of metaphysics. At the present moment these partial distrusts are superseded by a deeper and more comprehensive misgiving, affecting not the method simply, but the aim and function of our Institution. Side by side with the literary pursuits of the scholar, the study of external nature has always had a place of honour in our traditions and our estimates of a manly education; and there is scarcely a special science which has not some brilliant names that range not far from the lines of our history; and from the favourite shelf of all our libraries, the *Principia* of Newton, the *Essays* of Franklin, the *Papers* of Priestley and Dalton, the "*Principles*" of Lyell, the *Biological Treatises* of Southwood Smith and Carpenter, and the records of Botanical research by Sir James Smith and the Hookers, look down upon us with something of a personal interest. The successive enlargements given by these skilled interpreters to our earlier picture of the world,—the widening Space, the deepening vistas of Time, the new groups of chemical elements and the precision of their combinations, the detected marvels of physiological structure, and the rapid filling-in of missing links in the chain of organic life,—have been eagerly welcomed as adding a glory to the realities around, and, by the erection of fresh shrines and cloisters, turning the simple temple in which we once stood into a clustered magnificence. Thus it was, so long as discoveries came upon us one by one; nor did any Biblical chronology or Apocalypse interfere with their proper evidence for an hour.

But *now*—must we not confess it?—certain shadows of anxiety seem to steal forth and mingle with the advancing light of natural knowledge, and temper it to a less genial warmth. It comes on, no longer in the simple form of pulse after pulse of positive and limited discovery, but with the ambitious sweep of a universal theory, in which facts given by observation, laws gathered by induction, and conceptions furnished by the mind itself, are all wrought up together as if of homogeneous validity. A report is thus framed of the Genesis of things, made up indeed of many true chapters of science, but systematized by the terms and assumptions of a questionable if not an untenable philosophy. To the inexpert reader this report seems to be all of one piece; and he is disturbed to find an account apparently complete of the “Whence and the Whither” of all things without recourse to aught that is Divine; to see the refinements of organism and exactitudes of adaptation disenchanted of their wonder; to watch the beauty of the flower fade into a necessity; to learn that Man was never *intended* for his place upon this scene, and has no commission to fulfil, but is simply flung hither by the competitive passions of the most gifted brutes; and to be assured that the élite beings that tenant the earth tread each upon an infinite series of failures, and survive as trophies of immeasurable misery and death. Thus an apprehension has become widely spread, that Natural History and Science are destined to give the *coup de grâce* to all theology, and discharge the religious phenomena from human life; that churches and their symbols must disappear like the witches’ chamber and the astrologists’ tower; and that, as everything above our nature is dark and void, those who affect to lift it lead it nowhither, and must take themselves away as “blind leaders of the blind.” Whether this apprehension

is well founded or not is a very grave question for society in many relations; and is emphatically urgent for those who educate men as spiritual guides to others, and who can invest them with no directing power except the native force of a mind at one with the truth of things and a heart of quickened sympathies. Hitherto, they have been trained under the assumptions that the Universe which includes us and folds us round is the Life-dwelling of an Eternal Mind; that the World of our abode is the scene of a Moral Government incipient but not yet complete; and that the upper zones of Human Affection, above the clouds of self and passion, take us into the sphere of a Divine Communion. Into this over-arching scene it is that growing thought and enthusiasm have expanded to catch their light and fire. And if "the new faith" is to carry in it the contradictions of these positions,—if it leaves us to make what we can of a simply molecular universe, and a pessimist world, and an unappeasable battle of life,—it will require another sort of Apostolate, and would make such a difference in the studies which it is reasonable to pursue, that it might be wisest for us to disband, and let the new Future preach its own gospel, and devise, if it can, the means of making the tidings "*glad*." Better at once to own our occupation gone than to linger on sentimental sufferance, and accept the indulgent assurance that, though there is no longer any *truth* in religion, there is some nice feeling in it; and that while, for all we have to teach, we might shut up to-morrow, we may harmlessly keep open still, as a nursery of "*Emotion*."* I trust that, when "emotion" proves empty, we shall stamp it out, and get rid of it.

Though, however, no partnership between the physicist

* See Professor Tyndall's Address before the British Association; with Additions, p. 61.

and the theologian can be formed on these terms of assigning the intellect to the one and the feelings to the other, may it not be that, in the flurry of exultation and of panic, they misconstrue their real position? and that their relations, when calmly surveyed, may not be in such a state of tension as each is ready to believe? Looking on their respective contentions from the external position of logical observation, and without presuming to call in question the received inductions of the naturalist, I believe that both parties mistake the bearing of those inductions upon religion; and that, although this bearing is in some aspects serious, it is neither of the quality nor of the magnitude frequently ascribed to it. I venture to affirm that the essence of religion, summed up in the three assumptions already enumerated, is independent of any possible results of the natural sciences, and stands fast through the various readings of the genesis of things.

The unpractised mind of simple times goes out, it is true, upon everything *en masse*, and indeterminately feels and thinks about itself and the field of its existence, the inner and the outer, the transient and the permanent, the visible and the invisible: its knowledge and its worship, the pictures of its fancy and the intuitions of its faith, are as yet a single tissue, of which every broken thread rends and deforms the whole. Hence the oldest sacred traditions run into stories of world-building; and the earliest attempts at a systematic interpretation of nature, in which physical ideas were clothed in mythical garb, are regarded by Aristotle as "*theological*." It must be admitted that our own age has not yet emerged from this confusion. And in so far as Church belief is still committed to a given kosmogony and natural history of Man, it lies open to scientific refutation, and has already re-

ceived from it many a wound under which it visibly pines away. It is needless to say that the *new* "book of Genesis," which resorts to Lucretius for its "first beginnings," to protoplasm for its fifth day, to "natural selection" for its Adam and Eve, and to evolution for all the rest, contradicts the *old* book at every point; and inasmuch as it dissipates the dream of Paradise, and removes the tragedy of the Fall, cancels at once the need and the scheme of Redemption, and so leaves the historical churches of Europe crumbling away from their very foundations. If any one would know how utterly unproducibile in modern daylight is the theology of the symbolical books, how absolutely alien from the real springs of our life, let him follow for a few hours the newest movement of ecclesiastical reform, and listen to the reported conferences at Bonn on the remedies for a divided Christendom. Scarcely could the personal re-appearance of Athanasius or Cyril on the floor of the council-hall be more startling, or the cries of anathema from the voices of the ancient dead have a more wondrous sound, than the reproduction as hopes of the future, by men of Munich, of Chester, of Pittsburg, and of the Eastern Church, of formulas without meaning for the present, the eager discussion of subtle varieties of falsehood, and the anxious masking of their differences by opaque phrases under which everybody manages to look. Such signs of strange intellectual anachronism excuse the aversion with which many a thoughtful man, with a heart still full of reverence, turns away from all religious association, and lives without a church. It has been the infatuation of ecclesiastics to miss the inner divine spirit that breathes through the sources of their faith, and to seize, as the materials of their system, the perishable conceptions and unverified predictions of more fervent but

darker times ; so that, in the structure they have raised, all that is most questionable in the legacy of the past,—obsolete Physics, mythical History, Messianic Mythology, Apocalyptic prognostications,—have been built into the very walls, if not made the corner-stone, and now by their inevitable decay threaten the whole with ruin. Why indeed should I charge this infatuation on councils and divines alone ? It is not professional but human ; it is a delusion which affects us all. We are for ever shaping our representations of invisible things, in comparison with other men's notions, into forms of definite opinion, and throwing them to the front, as if they were the photographic equivalent of our real faith. Yet somehow the essence of our religion never finds its way into these frames of theory ; as we put them together it slips away, and, if we turn to pursue it, still retreats behind ; ever ready to work with the will, to unbind and sweeten the affections, and bathe the life with reverence ; but refusing to be seen, or to pass from a divine hue of thinking into a human pattern of thought. The effects of this infatuation in the founders of our civilization are disastrous on both sides,—not only to the Churches whose system is undermined, but to the spirit of the Science which undermines it. It turns out that, with the sun and moon and stars, and in and on the earth both before and after the appearance of our race, quite other things have happened than those which the consecrated kosmogony recites : especially Man, instead of falling from a higher state, has risen from a lower, and inherits, instead of a uniform corruption, a law of perpetual improvement ; so that the real process has the effect, not only of an enormous magnifier, but of an inverting mirror, on the theological picture. Yet, notwithstanding the deplorable appearance to which that picture

is thus reduced, it is exhibited afresh every week to millions still taught to regard it as Divine. This is the mischief on the Theologic side. On the other hand, Science, in executing this merited punishment, has borrowed from its opponents one of their worst errors, in identifying the anomalous or lawless with the divine, and assuming that whatever falls within the province of nature drops thereby out of relation to God. As the old story of Creation called in the Supreme Power only by way of supernatural paroxysm, to gain some fresh start beyond the resources of the natural order, so the new inquirers, on getting rid of these crises, fancy that the Agent who had been invoked for them is gone, and proclaim at once that Matter without Thought is competent to all. In thus confounding the idea of the Divine Mind with that of *miracle-worker*, they do but go over to the theological camp, and snatch thence its oldest and bluntest weapon, which in modern conflict can only burden the hand that wields it. How runs the history of their alleged negative discovery? The Naturalist was told in his youth that at certain intervals—at the joints, for instance, between successive species of organisms—acts of sudden creation summoned fresh groups of creatures out of nothing. These epochs he attacks with riper knowledge; he finds a series of intermediary forms, and fragmentary lines of suggestion for others; and when the affinities are fairly complete, and the chasm in the order of production is filled up, he turns upon us and says, ‘See, there is no break in the chain of origination, however far back you trace it; we no more want a Divine Agent *there* and *then* than *here* and *now*.’ Be it so; but it is precisely here and now that He is needed, to be the fountain of orderly power, and to render the tissue of Laws intelligible by his presence; his witness is found not

only in the gaps, but in the continuity of being,—not in the suspense, but in the everlasting flow of change; for, the universe as known, being throughout a system of *Thought-relations*, can subsist only in an eternal Mind that thinks it.

The whole history of the Genesis of things Religion must unconditionally surrender to the Sciences. Not indeed that it is without share in the great question of *Causality*; but its concern with it is totally different from theirs; for it asks only about the '*Whence*' of all phenomena, while they concentrate their scrutiny upon the '*How*:' by which I mean that their end is accomplished as soon as it has been found in what groups phenomena regularly cluster, and on what threads of succession they are strung, and into what classification their resemblances throw them. These are matters of fact, directly or circuitously ascertainable by perception, and remaining the same, *be their originating power what it may*. On *that* ulterior question the Sciences have nothing to say. And, on the other hand, when Religion here takes up her word and insists that the phenomena thus reduced to system are the product of *Mind*, she in no way prejudges the *modus operandi*, but is ready to accept whatever affinities of aspect, whatever adjustments of order, the skill of observers may reveal. On *these* investigations she has nothing to say. If indeed you could ever show that the method of the universe is one along which *no Mind could move*—that it is absolutely incoherent and unideal—you would destroy the possibility of Religion as a doctrine of *Causality*: only, however, by simultaneously discovering the impossibility of Science,—which wholly consists in organizing the phenomena of the world into an intellectual scheme reflecting the structure of its archetype. That those who labour to render

the universe *intelligible* should call in question its *relation to intelligence*, is one of those curious inconsistencies to which the ablest specialists are often the most liable when meditating in foreign fields. If it takes *mind* to construe the world, how can it require the negation of mind to constitute it?

It is not in the history of Superstition alone that the human mind may be found struggling in the grasp of some mere Nightmare of its own creation: a philosophical hypothesis may sit upon the breast with a weight not less oppressive and not more real; till a friendly touch or a dawning light breaks the spell, and reveals the quiet morning and the bed of rest. Is there, for instance, no logical illusion in the Materialist doctrine which in our time is proclaimed with so much pomp and resisted with so much passion? 'Matter is all I want,' says the Physicist: 'give me its atoms alone, and I will explain the universe.' 'Good; take as many of them as you please: see, they have all that is requisite to Body, being homogeneous extended solids.' 'That is not enough,' he replies; 'it might do for Democritus and the mathematicians, but I must have considerably more: the atoms must be not only in motion and of various shapes, but also of as many kinds as there may be chemical elements; for how could I ever get water, if I had only hydrogen molecules to work with?' 'So be it,' we shall say; 'only this is a considerable enlargement of your specified datum,—in fact, a conversion of it into several; yet, even at the cost of its monism, your scheme seems hardly to gain its end; for by what manipulation of your resources will you, for example, educe *consciousness*? No organism can ever show you more than matter moved; and, as Dubois-Reymond observes, there is an impassable chasm "between definite movements of defi-

nite cerebral atoms and the primary facts which I can neither define nor deny,—*I feel pain or pleasure, I taste a sweetness, smell a rose-scent, hear an organ tone, see red,* together with the no less immediate assurance they give, *therefore I exist:*” “it remains,” he adds, “entirely and for ever inconceivable that it should signify a jot to a number of carbon and hydrogen and nitrogen and oxygen and other atoms how they lie and move;” “in no way can one see how from their concurrence consciousness can arise.”* What say you to this problem? ‘It does not daunt me at all,’ he declares: ‘of course you understand that my atoms have all along been affected by gravitation and polarity; and now I have only to insist, with Fechner,† on a difference among molecules; there are the *inorganic*, which can change only their *place*, like the particles in an undulation; and there are the *organic*, which can change their *order*, as in a globule that turns itself inside out. With an adequate number of these, our problem will be manageable.’ ‘Likely enough,’ we may say, ‘seeing how careful you are to provide for all emergencies; and if any hitch should occur at the next step, where you will have to pass from mere sentiency to Thought and Will, you can again look in upon your atoms, and fling among them a handful of Leibnitz’s monads, to serve as souls in little, and be ready, in a latent form, with that *Vorstellungsfähigkeit* which our picturesque interpreters of nature so much prize.

* “Ueber die Grenzen des Naturerkennens,” p. 29. Compare p. 20. “I will now prove, as I believe in a very cogent way, not only that, in the present state of our knowledge, Consciousness cannot be explained by its material conditions,—which perhaps every one allows,—but that from the very nature of things it never will admit of explanation by these conditions.”

† Einige Ideen zur Schöpfungs- und Entwicklungsgeschichte der Organismen, §§ i. ii.

But surely you must observe how this "Matter" of yours alters its style with every change of service: starting as a beggar, with scarce a rag of "property" to cover its bones, it turns up as a Prince, when large undertakings are wanted, loaded with investments, and within an inch of a plenipotentiary. In short, you give it precisely what you require to take from it; and when your definition has made it "pregnant with all the future," there is no wonder if from it all the future might be born.'

"We must radically change our notions of Matter," says Professor Tyndall; and then, he ventures to believe, it will answer all demands, carrying "the promise and potency of all terrestrial life."* If the measure of the required "change in our notions" had been specified, the proposition would have had a real meaning, and been susceptible of a test. Without this precision, it only tells us, "Charge the word potentially with your quæsitæ, and I will promise to elicit them explicitly." It is easy travelling through the stages of such an hypothesis; you deposit at your bank a round sum ere you start; and drawing on it piecemeal at every pause, complete your grand tour without a debt. Words, however, ere they can hold such richness of prerogative, will be found to have emerged from their physical meaning, and to be truly *θεοφόρα ὀνόματα*,—terms that bear God in them, and thus dissolve the very theory which they represent. Such extremely clever Matter,—matter that is up to everything, even to writing Hamlet, and finding out its own evolution, and substituting a molecular plébiscite for a divine monarchy of the world, may fairly be regarded

* Address before the British Association; with Additions, pp. 54, 55. Compare the statement, by Dubois-Reymond, of the opposite opinion, quoted supra, p. 13, note.

as a little too modest in its disclaimer of the attributes of Mind.

Nor is the fallacy escaped by splitting our datum into two, and instead of crowding all requisites into Matter, leaving it on its old slender footing, and assuming along with it *Force* as a distinct entity. The two postulates will perform their promise, just like the one, on condition that you secrete within them in the germ all that you are to develop from them as their fruit; and in this case the word "*Force*" is the magical seed-vessel which is to surprise us with the affluence of its contents. The surprise is due to one or two nimble-witted substitutions, of which a conjuror might be proud, whereby unequals are shown to be equals, and out of an acorn you hatch a chicken. First, the noun *Force* is sent into the plural (which of course is only itself in another form), and so we get provided with several of them. Next, as there is now a class, the members must be distinguishable; and, as they are all of them activities, they will be known one from another by the sort of work they do: one will be a mechanician,—another a chemist,—a third will be a swift runner along the tracks of life,—a fourth will find out all the rest,—will do our reasoning about them, and get up all our examinations for us. The last of these, every one must own—at least every one who has graduated—is much more dignified than the others; and all through we rise, at every step, from ruder to more refined accomplishment. With things thus settled, we seem to have found Plato's ideal State, in which every order minds its own business, and no element presumes to cross the line and become something else. Not so, however; for, after thus differencing the forces and keeping them under separate covers, the next step is to unify them, and show them all as the homogeneous contents of a single

receptacle. The forces, we are assured, are interchangeable, and relieve each other; when one has carried its message, it hands the torch to another, and the light is never quenched or the race arrested, but runs an eternal round. But why then, you will say, divide them first, only to unite them afterwards? Follow our logical wonder-worker one move further, and you will see. He has now, we may say, his four vessels standing on the table; the contents of the whole are to be whisked into one; having them all, he has more ways than one of working out their equivalence; and it remains at his option, *which* he shall lift to let the mouse run out. For some reason, best known to himself, he never thinks of choosing the last; indeed it is pretty much to avoid this, and obtain other receptacles *empty of thought*, that he broke down the original unity. If he be a circumspect physiologist, he will probably prefer the third, and exhibit the universal principle as in some sense *living*; if he be a daring physicist, he will lay hold of the first, and pronounce *mechanical* dynamics good enough for the kosmos.

Am I asked to indicate the precise seat of fallacy in the hypothesis which I have ventured to criticise? The alleged division of forces, considered as something over and above the phenomena ascribed to them, is absolutely without ground; each of them, as apart from any other, has a purely ideal existence, without the slightest claim to objective reality. Science, dividing its labours, has to break down phenomena into sets according to their resemblances and the affinities of their conditions; it disposes them thus into natural provinces, the laws of which, when ascertained, give us the rules by which the phenomena assort themselves or successively arise,—but nothing more. But whatever field we survey, we carry into it the belief, inherent

in the constitution of the intellect itself, of a Causal Power as the source of every change: we believe it for each, we believe it for all: it repeats itself identically with every instance; and when a multitude of instances are tied up together in virtue of their similarity and made into a class, this constantly recurring reference, this identity of relation to a power behind, is marked by giving that power a singular name; as the phenomena of weight are labelled with the title *Gravitation*, expressing unity in their causal relation. Were we closeted with this group of facts alone, this unity would live in our minds without a rival, and we should have no numerical distinction in our account of force. But, meanwhile, other observers have been going through a like experience in some separate field; have gleaned and bound into a sheaf its scattered mass of homogeneous growths, and denoted them by another name—say, *Electricity*—carrying in it the same haunting reference to a source for them all. Now why is this a *new* name? Is it that we have found a new *power*? Have we carried our observation *behind the phenomena*, so as, in either instance, to find any power at all? Are the two cases differenced by anything else than the dissimilarity of their phenomena? Run over these distinctions, and, when you have exhausted them, is there anything left by which you can compare and set apart from each other the respective producing forces? All these questions must be answered in the negative; the differentiations lie only in the effects; the causal power is not *observed*, but *thought*; and that thought is the same, not only from instance to instance, but from field to field; and by this sameness it cancels plurality from Force, and reduces the story of their transmigration into a scientific mythology. The distinctive names therefore mark only differences in the *sets of phenomena*; they are simply in-

struments of classification for noticeable changes in nature, and carry no partitions into the mysterious depths behind the scenes. The dynamic catalogue being thus left empty and cut down to a single term, do we talk nonsense when we attach qualifying epithets to the word *Force*, and speak of 'electric force,' of 'nerve force,' of 'polar force,' &c.? Not so; provided we mean by those phrases, simply, *Force*, *quantum sufficit*, now for *one set of phenomena*, now for *another*, without implication of other difference than that of the seat and conditions and aspect of the manifestations. But the moment we step across this restriction, we are in the land of myths.

Power then is one and undivided. As external causality, it is not an *object of knowledge* but an *element given in the relations of knowledge*, a *condition of our thinking of phenomena at all*. Were this all, our necessary belief in it would be unattended by any *representation* of it; it would remain an intellectual notion (Begriff), and we could no more bring it before the mind under any definite type than we can the meaning of such words as "substance" and "possibility." In one field, however, and no more, it falls into coincidence with our experience; for we ourselves put forth power in the exercise of Will and are personally conscious of Causality; and this sample of *immediate* knowledge because *self-knowledge* supplies us with the means of *representing* to ourselves what else we should have to *think* without a type. Here accordingly we reach, I venture to affirm, what we really mean, and what alone saves us from the mere empty form of meaning, whenever we assent to the axiom of causality. It is very true that the exercise of Will, having more or less of complication, itself admits of analysis; *intention* may play a larger or smaller part, may leave less or more

for the share of automatic or impulsive activity ; and by letting the former withdraw into the background of our conception, we may come to think of *causation apart from purpose*,—which, I suppose, is the *idea of Force*. But this is a bare fiction of abstraction, shamming an integral reality ;—an old soldier pensioned off from actual duty, but allowed to wear his uniform and look like what he was. Since we have to assume causality for all things, and the only causality we know is that of living Mind, that type has no legitimate competitor. Even if it had, its sole adequacy would leave it in possession of the field. For among the products to be accounted for is the whole class and hierarchy of *minds* ; and unless there is to be more in the effect than in the cause, nothing less than Mind is competent to realize a scheme of being whose ranks ascend so high. As for the plea,—which has unhappily passed into a commonplace,—that, even if it be so, that transcendent object is beyond all cognizance,—I will only say that this doctrine of Nescience stands in exactly the same relation to causal power, whether you construe it as Material Force or as Divine Agency. Neither can be *observed* ; one or the other must be *assumed*. If you admit to the category of knowledge only what we learn by observation, particular or generalized, then is Force unknown ; if you extend the word to what is imported by the intellect itself into our cognitive acts, to make them such, then is God known.

This comment on current hypotheses refers to them only so far as they overstep the limits of Science, and aspire to the seat of judgment on ulterior questions of Philosophy. So long as they simply descend upon this or that realm of nature, and try their strength there in simplifying its laws or rendering them deducible,—or, passing from province to province, labour to formulate equations available for several

or for all,—they must be respectfully left to pursue their work; and whenever their authors present their demonstrated “system of the world,” all reasonable men will learn it from them, whatever it may be, as scholars from a master. In the investigation of the genetic order of things, Theology is an intruder, and must stand aside. Religion first reaches its true ground, when, leaving the problem of what *has happened*, it takes its stand on what *for ever is*. I do not say that it absolutely matters not to us how antecedent ages have been filled, and have brought up the march with which we fall into step to-day; for we are beings of large perspective, concentrating in us many lines of distance and images between the eye and the horizon. But still, if the light were all turned off from the Past, and on facing it we looked only into the Night, the reality for us is not *there*, but *here*, where it is Day. However the present may have come about, I find myself in it: in whatever way my faculties may have been determined, faculties they are, and they give me insight into my duty and outlook on my position: however the world, of Nature and of Society, may have grown to what it is, its scene contains me, its relations twine around me, its physiognomy appeals to me with a meaning from behind itself. If these data do not suffice to show me my kinship with what is above, below, around me, and find my moral and spiritual place, I shall not be greatly helped by discovering how many ages my constitution has been upon the stocks, and its antecedents been upon the way. The beings that touch me with their look and draw me out of myself, the duties that press upon my heart and hand, are on the spot, speaking to me while the clock ticks; and to love them aright, to serve them faithfully, and construct with them a true harmony of life, is the same task, whether I bear within me the inheritance of

a million years, or, with all my surroundings, issued this morning from the dark.

Remaining then at home, and consulting the nature which we have and which we see, we find that, far from being self-inclosed, or related only to its visible dependences, it turns a face, on more than one side, right towards the Infinite, and, often to the disregard of nearer things, moves hither or thither as if shrinking from a shadow advancing thence, or drawn by a light that wins it forward. We are constantly,—even the most practical of us,—seeing what is invisible and hearing what is inaudible, and permitting them to send us on our way. Not left, like the mere animal, to be the passive resultant of forces without and instincts within, but invested with an alternative power, we are conscious partners in the architecture of our own character, and know ourselves to be the bearers of a *trust*; and this fiduciary life takes us at once across the boundary which separates nature from what transcends it. Seducing appetites and turbulent passions and ignoble ease never gain our undivided ear; while we bend to them, there are pleading voices which distract us, and which, if they do not save us, follow us with an expostulating shame. Nor, if ever we wake up and kindle at the appeal of misery and the cry of wrong, or with the spontaneous fire of disinterested affection or devotion to the true and good, can we construe them into anything less than a Divine claim upon us: we know their right over us at a glance; we feel on us their look of Authority in reply: if, to our careless fancy, we were ever our own, we can be so no more. Once stirred by the higher springs of character, and possessed by the yearning for the perfect mind, we are aware that to live out of these is our supreme obligation, and that for us nothing short of this is holy. To have *seen* the vision

of the best and possible and *not* to pursue it, is to mar the true idea of our nature, and to fall from its heaven as a rebel and an outcast. This inner life of Conscience and ideal aspiration supplies the elements and sphere of Religion; and the discovery of Duty is as distinctly relative to an Objective Righteousness as the perception of Form to an external Space: it is a bondage, with superficial reluctance but with deeper consent, to an invisible Highest; and both moral Fear and moral Love stand before the face of an Authority which is the eternal Reality of the holy, just, and true. On the first view, you might expect that the stronger the enthusiasm for goodness, and the surer the recoil from ill, so much the fitter would the mind be to stand alone in its self-adequacy; yet it is precisely at such elevation that it most trusts in a Supreme Perfection to which it only faintly responds, and leans for support on that everlasting stay. The life of aspiration, attempting to nurse itself, soon pines and dies; it must breathe a diviner air and take its thirst to unwasting springs; and wherever it settles into a quiet tension of the will and an upturned look of the affections, it is sustained by habitual access to the Fountain of sanctity, and by the consciousness of an Infinite sympathy. Are not both the need and the existence of this objective sustaining power acknowledged by Mr. Matthew Arnold himself, when he insists on that strange entity, "That, not ourselves, *which makes for righteousness*"? By an abstraction, however, such a function cannot be discharged; nothing ever "makes for righteousness" but One who *is* righteous. To support and raise the less, there must be a Greater; and that which does not think and will and love, whatever the drift of its blind power, may indeed be larger, but is not greater, than the sinning soul that longs for purity.

Now so long as the devotee of Goodness is possessed by a faith, not only in his own aspirations, but in an Infinite Mind which fosters and secures them as counterparts of the highest reality, it is of little moment ethically what theory he adopts of their mode of origin within him. Whether he takes them as intuitive data of his Understanding, or, with Hartley, as a transfiguration of sensible interests into a disinterested glory, or, with Darwin and Spencer, as the latest refinement of animal instinct and discipline after percolating through uncounted generations,—that which he has reached,—be it first or last,—is at all events *the truth of things*, the primordial and everlasting certainty, in comparison with which all prior stages of training, if such there were, give but dim gropings and transient illusions. In Hartley himself, accordingly, a doctrine essentially materialistic and carrying in it the whole principle of Evolution, so far as it could be epitomized in the individual's life, easily blended with moral fervour and even a mystic piety; and, in Priestley, with a noble heroism of veracity and an unswerving confidence in the perfect government of the universe. But what if the process of atomic development be taken as the *Substitute for God*, not as His *method*? if you withdraw from the beginning all *Idea* of what is to come out at the end,—all Model or Archetype to control and direct the procedure, and restrain the *possible* from running off indefinitely into the false and wrong? Do you suppose that the ethical results can be still the same? The inevitable difference, I think, few considerate persons will deny; and without attempt to measure its amount, its chief feature may be readily defined.

It was often said by both James and John Stuart Mill, that you do not alter, much less destroy, a feeling or sentiment by giving its history: from whatever unexpected

sources its constituents may be gathered, when once their confluence is complete the current they form runs on the same, whether you know them or not. How true this may be is exemplified by the younger Mill himself; who, while resolving the moral sentiments into simple pleasure and pain, and moral obligation into a balance of happiness, yet nobly protested that he would rather plunge into eternal anguish than falsely bend before an unrighteous power. If so it be, then one in whom benevolence, honour, purity, had reached their greatest refinement and most decisive clearness would suffer no change of moral consciousness, on becoming convinced that it is a "poetic thrill" of his "ganglia"* induced by the long breaking-in through which his progenitors have passed, in conformity with the system of organic modification that has deprived him of his fur and his tail. In spite of the apparent incongruity, let us grant that his higher affections will speak to him exactly as before, and make their claims felt by the same tones of sacred authority, so that they continue to subdue him in reverence or lift him as with inspiration. The surrender to them of heart and will under these conditions, the vow to abide by them and live in them, may still deserve acknowledgment as *Religion*; but, inasmuch as they have shrunk into mere unaccredited subjective susceptibilities, they have lost all support from Omniscient approval, and all presumable accordance with the reality of things. For what *are* these moral intensities of his nature, seen under his new lights? Whence is their message? With what right do they deliver it to him in that imperative voice? and, if it be slighted, prostrate him with unspeakable compunction? Are they an influx of Righteousness and Love from the

* Professor Tyndall's Address, p. 49.

life of the universe? Do they report the insight of beings more august and pure? No; they are capitalized "experiences of utility" and social coercion, the record of ancestral fears and satisfactions stored in his brain, and re-appearing with divine pretensions, only because their animal origin is forgotten; or, under another aspect, they are the newest advantage won by gregarious creatures in "the struggle for existence." From such an origin it is impossible to extract credentials for any elevated claim: so that although low beginnings may lead, in the natural order, to what is better than themselves,—as a Julia may be the mother of an Agrippina,—yet in such case the superiority lies in new endowment, which is *not* contained in the inheritance. For such new endowment as we gain in the ascent from interest to conscience the theory of transmission cannot provide; if the coarse and turbid springs of barbarous life, filtered through innumerable organisms, flow limpid and sparkling at last, the element is still the same, though the sediment is left behind; and as it would need a diviner power to turn the water into wine, so Prudence run however fine, social Conformity however swift and spontaneous, can never convert themselves into Obligation. Hence arises, I think, an inevitable contradiction between the scientific hypothesis and the personal characteristics of a high-souled disciple of the modern negative doctrine. For his supreme affections no adequate Object and no corresponding Source is offered in the universe: if they look back for their cradle, they see through the forest the cabin of the savage or the lair of the brute; if they look forth for their justifying Reality and end, they fling vain arms aloft and embrace a vacancy. They cannot defend, yet cannot relinquish, their own enthusiasm: they bear him forward upon heroic lines that sweep wide of his own theory; and, transcending their

own reputed origin and environment, they float upon vapours and are empty, self-poised by their own heat. One or two instances will illustrate the way in which what is best in our humanity is left, in the current doctrine, unsupported by the real constitution of the world.

Compassion—the instinctive response to the spectacle of misery—has a twofold expressiveness: it is in us a protesting vote against the sufferings we see; and a sign of faith that they are not ultimate but remediable. Its singularity is, to be not one of these alone, but both. Were it a simple repugnance, it would drive us from its object; but it is an *aversion which attracts*: it snatches us with a bound to the very thing we hate, and not with hostile rush, but with softened tread and gentle words and uplifting hand. And what is the secret of this transfiguration of horror into love? It could never be but for the implicit assurance that for these wounds there is healing possible, if the nursing care does not delay. Should we not say then, if we trusted its own word about itself, that this principle, so deep and intense in our unfolded nature, is an evident provision for a world of *hopeful sorrow*? It is distinctly relative to pain, and would be out of place in a scene laid out for happiness alone; yet treats it as transient, and on passing into the cloud already sees the opening through. It enters the infirmary of human ills with the tender and cheerful trust of the young sister of mercy, who binds herself to the perpetual presence of human maladies, that she may be for ever giving them their discharge. Compassion institutes a strange order of servitude: it sets the strong to obey the weak, the man and woman to wait upon the child, and youth and beauty to kneel and bend before decrepitude and deformity. How then do the drift and faith of this instinct agree with the method of

the outer world as now interpreted? Do they copy it exactly, and find encouragement from the great example? On the contrary, Nature, it is customary to say, is *pitiless*, and, while ever moving on, makes no step but by crushing a thousand-fold more sentient life than she ultimately sets up, and sets up none that does not devour what is already there. The battle of existence rages through all time and in every field; and its rule is to give no quarter,—to despatch the maimed, to overtake the halt, to trip up the blind, and drive the fugitive host over the precipice into the sea. Nature is fond of the mighty, and kicks the feeble; and, while for ever multiplying wretchedness, has no patience with it when it looks up and moans. And so all-pervading is this rule, that evil, we are told, cannot really be put down, but only masked and diverted; if you suppress it here, it will break out there; the fire of anguish still rolls below and has alternate vents; when you stop up *Ætna*, it will blot out Sodom and Gomorrhah, and bury the cities of the plain. Who can deny that such teachings as these set the outer universe and our inner nature at its best at hopeless variance with one another? Do they not depress the moral power to which we owe the most humanizing features of our civilization? We have not to go far for a practical answer. Within a few weeks the question has been raised whether the recent flow of commiseration towards the famine-stricken districts of India does not offend against the Law of Nature for reducing a superfluous population; and whether there were not advantages in the old method of taking no notice of these things, and letting Death pass freely over his threshing-floor and bury the human chaff quietly out of the way. Moral enthusiasm makes many a mischievous mistake in its haste and blindness, and greatly needs the guidance of wiser thought; but

this tone of moral scepticism, which disparages the very springs of generous labour, and treats them as follies laughed at by the cynicism of Nature, is a thousand-fold more desolating. For it carries poison to the very roots of good. It is as the bursting out of salt-springs in a valley of fruits; it soaks through the prolific soil of all the virtues, and turns the promise of Eden into a Dead Sea shore.

Beyond the range of the merely compassionate impulse, *Self-forgetfulness* in love for others has a foremost place in our ideal of character, and our deep homage as representing the true end of our humanity. We exact it from ourselves, and the poor answer we make to the demand costs us many a sigh; and till we can break the bonds that hold us to our own centre, and lose our self-care in constant sacrifice, a shadow of silent reproach lies upon our heart. Who is so faultless, or so obtuse, as to be ignorant what shame there is, not only in snatched advantages and ease retained to others' loss, but in ungentle words, in wronging judgment within our private thoughts alone; nay, in simple blindness to what is passing in another's mind? Who does not upbraid himself for his slowness in those sympathies which are as a multiplying mirror to the joys of life, reflecting them in endless play? And the grace so imperfect in ourselves wins our instant veneration when realized in others. The historical admirations of men are often, indeed, drawn to a very different type of character: for Genius and Will have their magnificence as well as Goodness its beauty: but before the eye of a purified reverence, neither the giants of force nor the recluses of saintly austerity stand on so high a pedestal as the devoted benefactors of mankind. The heroes of honour are great; but the heroes of service are greater; nor does any appeal speak more home to us than a true story of life risked,

of ambitions dropped, of repose surrendered, of temper moulded, of all things serenely endured,—perhaps unnoticed and in exile,—at some call of sweet or high affection. Is then this religion of Self-sacrifice the counterpart of the behaviour of the objective world? Is the same principle to be found dominating on that great scale? Far from it. *There*, we are informed, the only rule is *self-assertion*: the all-determining Law is relentless competition for superior advantage; the condition of obeying which is, that you are to forego nothing, and never to miss an opportunity of pushing a rival over, and seizing the prey before he is on his feet again. We look without, and see the irresistible fact of selfish scramble: we look within, and find the irresistible faith of unselfish abnegation. So here, again, Morals are unnatural, and Nature is unmoral; and if, beyond Nature, there is nothing supreme in both relations to determine the subordination and resolve the contradiction, he who would be loyal to the higher call must be so without ground of trust; if he will not betray his secret ideal, he must follow it unverified, as a mystic enchantment of his own mind.

Once more; the *Sense of Duty* enforces the suggestions of these and other affections by an authority which we recognise as at once within us and over us, and making them more than *impulses*, more than *ideals*, and establishing them in *binding* relations with our Will. The rudest self-knowledge must own that the consciousness of *Moral Obligation* is an experience *sui generis*, separated by deep distinctions from *outward necessity* on the one hand and *inward desire* upon the other; and the only psychology which can bridge over these distinctions is that which escapes with its analysis into prehistoric ages, and finds it easy to grow vision out of touch, and read back all differentiation into

sameness. No one would carry off the problem into that darkness who could deal with it in the present daylight: so, we may take it as confessed, that *to us* the suasion of Right speaks with a voice which no charming of pleasure and no chorus of opinion can ever learn to mimic. To disregard *them* is a simple matter of courage; we defy them, and are free: but if from *it* we turn away, we hear pursuing feet behind; and should we stop our ears, we feel upon us the grasp of an awful hand. Moral good would, in our apprehension, cease to be what it is, were it constituted by any natural good, or related to it otherwise than as its superior. It is not a *personal* end—one among the many satisfactions assigned to the separate activities of our constitution: else, it would be at our disposal, and we might forego it. Others are our partners in it: for it sets up *Rights* as counterparts to *Duties*, and widens by its reciprocity into a common element of Humanity. Is *that* then its native home? Have men created it, as an expression of their general wish,—a concentrated code of civic police? We cannot rest in this: for no aggregate of wills, no public meeting of mankind, though it got together all generations and all contemporary tribes, could by vote make perfidy a virtue and turn pity into a crime. Moral Right is thus no *local* essence; but by its centrifugal force, relatively to our abode, slips off the earth and assumes an absolute universality as the law of all free agency. That it should present itself to us in this transcendent aspect is intelligible enough, if it be identified with the Universal Mind, and thence imparted to dependent natures permitted to be like Him: for, in that case, the related feelings and convictions are *true*; in the order of reality, Righteousness *is* prior to the pains and pleasures of our particular faculties and the natural exigencies of our collective life; and our allegiance

is due to an eternal Perfection which penetrates the moral structure of all worlds. How then does this intuitive faith of our responsible will, this worship of an eternally Holy, stand with the kosmical conceptions now tyrannizing over the imaginations of men? It encounters the shock of contemptuous contradiction. Ethically, we are assured, the known world culminates in us. Before us, there was nothing morally good: over us, there is nothing morally better: Man himself is here the supreme being in the universe. In the just, the beneficent, the true, there is no pre-existence: they are not the roots of reality, but the last blossoms of the human phenomena. And even there, the fair show which gives them their repute of an ethereal beauty is but the play of an ideal light upon coarse materials;—rude pleasures and ruder constraints are all that remain when the increments of fancy have fallen away. The real world provides *interests* alone; which, when adequately masked, call themselves virtues and pass for something new: and, duped by this illusion, we dream of a realm of authoritative Duty, in which the earth is but a province of a supramundane moral empire. And so, we must conclude, the Conscience which lives on this sublime but empty vision has transcended the tuition of Nature, and, in growing wiser than its teacher, has lost its foothold on Reality, only to lean on a phantom of Divine support.

On the hypothesis of a Mindless universe, such is the fatal breach between the highest inward life of man and his picture of the outer world. All that is subjectively noblest turns out to be the objectively hollowest; and the ideal, whether in life and character, or in the beauty of the earth and heaven, which he had taken to be the secret meaning of the Real, is repudiated by it, and floats through space as a homeless outcast. Even in this its desolation a

devoted disciple will say, 'I will follow thee whithersoever thou goest;' but how heavy the cross which he will have to bear! Religion, under such conditions, is a defiance of inexorable material laws in favour of a better which they have created but cannot sustain,—a reaction of man against Nature, which he has transcended,—a withdrawal of the Self which a resistless force pushes to the front,—a preservation of the weak whom Necessity crushes, a sympathy with sufferings which life relentlessly sets up,—a recognition of authoritative Duty which cannot be. Or will you perhaps insist that, in this contrariety between thought and fact, Religion must take the other side, discharge the *θεῖα δὀνειπαρα* as illusory, and in her homage hold fast to the solid world? This might perhaps in some sense be, if you only gave us a world which it was possible to respect. But, by a curious though intelligible affinity, the modern doctrine allies itself with an unflinching pessimism; it plays the cynic to the universe,—penetrates behind its grand and gracious airs, and detects its manifold blunders and impostures: what skill it has it cannot help; and the only faults and horrors that are *not* in it are those which are too bad to live. Human life, which is the summit that has been won, is pronounced but a poor affair at best; and the scene which spreads below and around is but as a battle-field at night-fall, with a few victors taking their faint shout away, and leaving the plain crowded with wounds and vocal with agony. Existence itself, insists Hartmann, is an evil, in proportion as its range is larger and you know it more, and that of cultivated men is worst of all;* and the constitution of the world (so stupidly does it work) would be an unpardonable crime, did it issue from a power that knew

* Philosophie des Unbewussten, c. xii. p. 598.

what it was about.* How can these malcontents find any *Religion* in obeying such a power? Can they approach it with contumely at one moment, and with devotion at the next? If they think so ill of Nature, there can be no *reverence* in their service of her laws: on the contrary, they abandon what they revere to bend before what they revile. To this humiliation the more magnanimous spirits will never stoop; they will find some excuse for still clinging to the ideal forms they cannot verify; will go apart with them with a high-toned love which stops short of faith but is full of faithfulness; will linger near the springs of poetry and art, and there forget awhile the disenchanting Actual; and will wonder perhaps whether this half-consecrated ground may not suffice, when the temples are gone, to give an asylum to the worshippers. Such loyalty of heart towards the harmonies that *ought* to prevail, with disaffection towards the discords that *do* prevail, may indeed lift the character of a man to an elevation half-divine; and in his presence, Nature, were she not blind, might start to see that she had produced a god. But, for all that, she is not going to succumb to him; she can call up her lower brood to suppress him, or monsters to chain him to her rock. He contends with the lower forces, believing them to be the stronger, and fights his losing battle against hordes of inferiors ever swarming to overwhelm what is too good for the world. Such religion as remains to him is a religion of despair,—a pathetic defiance of an eternal baser power. And if there be anything tragic in earth or heaven, it is the proud desolation of a mind which has to regard itself as Highest, to know itself the seat of some love and justice and devotion to the good, and to look upon the system of

* Ap. Strauss: *der alte und der neue Glaube*, p. 223.

the Universe as cruel, ugly, stupid and mean. The most touching episodes of history are perhaps those which disclose the life of genius and virtue under some capricious and ignoble tyranny,—asserting itself in the ostracism of an Aristides, the hemlock-cup of Socrates, the blood-bath of Thræsea; and no other than this is the life of every man who, walking only by his purest inner lights, finds that they illumine no nature but his own, and are baffled and quenched by the outer darkness.

It cannot be denied that there does exist this contrariety between the modern materialistic philosophy and religious faith. It cannot be believed that this contrariety is chargeable on any mutual contradiction among the human faculties themselves. Were we really placed between two informants that said 'Yes' at the right ear and 'No' at the left, we should simply be without cognitive endowment at all, and all the pulsations of thought would cancel each other and die. Can we end the strife by separating the provinces of the two opposites, and saying that the function of the one is *to know*, of the other *to create*?* Certainly, "creative" power is something grand, and Theology should perhaps feel honoured to be invested with it. But, alas! a *known* materialism and a *created* God presents a combination which thought repudiates and reverence abhors; and the suggestion of which must be met with the counter affirmations, that the atomic hypothesis is a thing *not known but created*, while God is *not created but known*. The only possible basis for a treaty of alliance between the tendencies now in conflict is not in lodging the one in the Reason and the other in the Imagination, in order to keep them from quarrelling, but in recognizing a Duality in the

* Professor Tyndall's Address, p. 64.

functions of Reason itself, according as it deals with phenomena or their ground, with law or with causality, with material consecution or with moral alternatives, with the definite relations of space and time and motion, or with the indefinite intensities of beauty and values of affection which bear us to the infinitely Good. When once this adjustment of functions has been considerably made, the disturbed equilibrium of minds will be reinstated, the panic and the arrogance of our time will disappear, and the progress of the intellect will no longer shake the soul from her everlasting rest.
