U. S. A.

THE AINSWORTH 30-INCH AUTOMATIC  
DIVIDING ENGINE

The most accurate circular dividing engine in the world and capable of dividing circles, each division of which is in its theoretical position to within one second of arc.

**NOTE.**

The Editor acknowledges the incompleteness of this little Manual, but believes that in a measure it fills a want that will best be felt after a year's use, and takes this occasion to solicit criticisms and suggestions regarding its revision, and the addition of such new matter as will render it indispensable to "the man in the field."

The price (25c) covers about one-half the cost of publication and insures the distribution of the "Manual" among live engineers and surveyors whom, we believe, will appreciate its compactness, brevity and lucidity.

Your suggestion as to its further improvement will be appreciated by

E. E. GRAHAM, Editor.

Denver, Colo., U. S. A.

January, 1911.
