The Right to Abortion: A Psychiatric View

A timely report of the best psychiatric opinion on the subject of abortion yet published.

The authors, a group of distinguished psychiatrists, analyze the question of legalized abortion from social, legal and ethical viewpoints. "Courageous and humane, the psychiatrists set this sometimes agonizing question in a wider framework, freeing it of confusing irrelevancies. The resulting succinct statement should help intelligent and responsible people to reach a rational solution without anxiety," writes Garrett Hardin, Professor of Human Ecology, University of California, Santa Barbara.

An important report on a controversial subject of concern to the general public as well as to organizations seeking support for more liberal abortion laws, *The Right to Abortion* is also a valuable source-book — containing reference notes, a bibliography, and index — for students.

GAP, an organization of approximately 300 psychiatrists, organized in the form of working committees which direct their efforts toward the study of various aspects of psychiatry, is also the author of *Sex and the College Student* and *Normal Adolescence*.
