GEARED WIND MILL

1928-39/17  
F. 90.3

## THE O. K. PATENT Solid Wheel Wind Mill **P.P.**

Is the most simple and perfect Solid Wheel Wind Mill in existence. For ten years we made this Mill for another party, and it gave such universal satisfaction that we adopted it six years ago, since which time it has taken the lead in many sections where a Solid Wheel Mill is preferred. No Wind Mill put on the market during the past five years has come to the front like our O. K. Solid Wheel, because it has absolutely less parts than any mill in existence. Always balances when in or out of gear. It requires no climbing vane or brake of any kind to keep it from turning when out of gear, like other solid wheels. You need never be afraid of your pump freezing up and bursting, caused by using cheap solid wheels if you use our O. K. Mill. They are the simplest mills to erect. It requires no mechanic to erect one of these mills. Full directions will be sent out with each mill ordered so that any one not a mechanic can erect it.

## THE DAISY O. K. WIND MILL.

---

The Daisy O. K. Mill is a counterpart of our celebrated O. K. Mill, except the four corner posts of the tower are extended above the platform and run up close to the main casting, and with the long pipe mast cut off and made to pivot above the platform.

This change was suggested, not because of any fault in the construction of the O. K. or the success of its work, for we maintain there is not a better mill on the market than our O. K. has proved itself to be, but the change was made simply to please some of our agents who would have no other mill but the O. K., and yet wanted a mill with the tower posts extending up to the main casting.

Since making the change, and seeing the mill erected on the tower, we are so well pleased with it that we have concluded to place it in our list as a regular mill, and offer it to all those who prefer it to the regular O. K.

As it is so similar to the O. K. mill we have thought best to, in some way, connect it by name to that mill, and at the same time separate it so as to designate it particularly, therefore have named it the Daisy O. K.

We take great pleasure in presenting this mill to our agents and the general public, for knowing what the O. K. has proved itself to be during the past 15 years, we are satisfied the Daisy has a future second to no mill.
