ALL OF BELFAST CLIMATE DIALOGUES

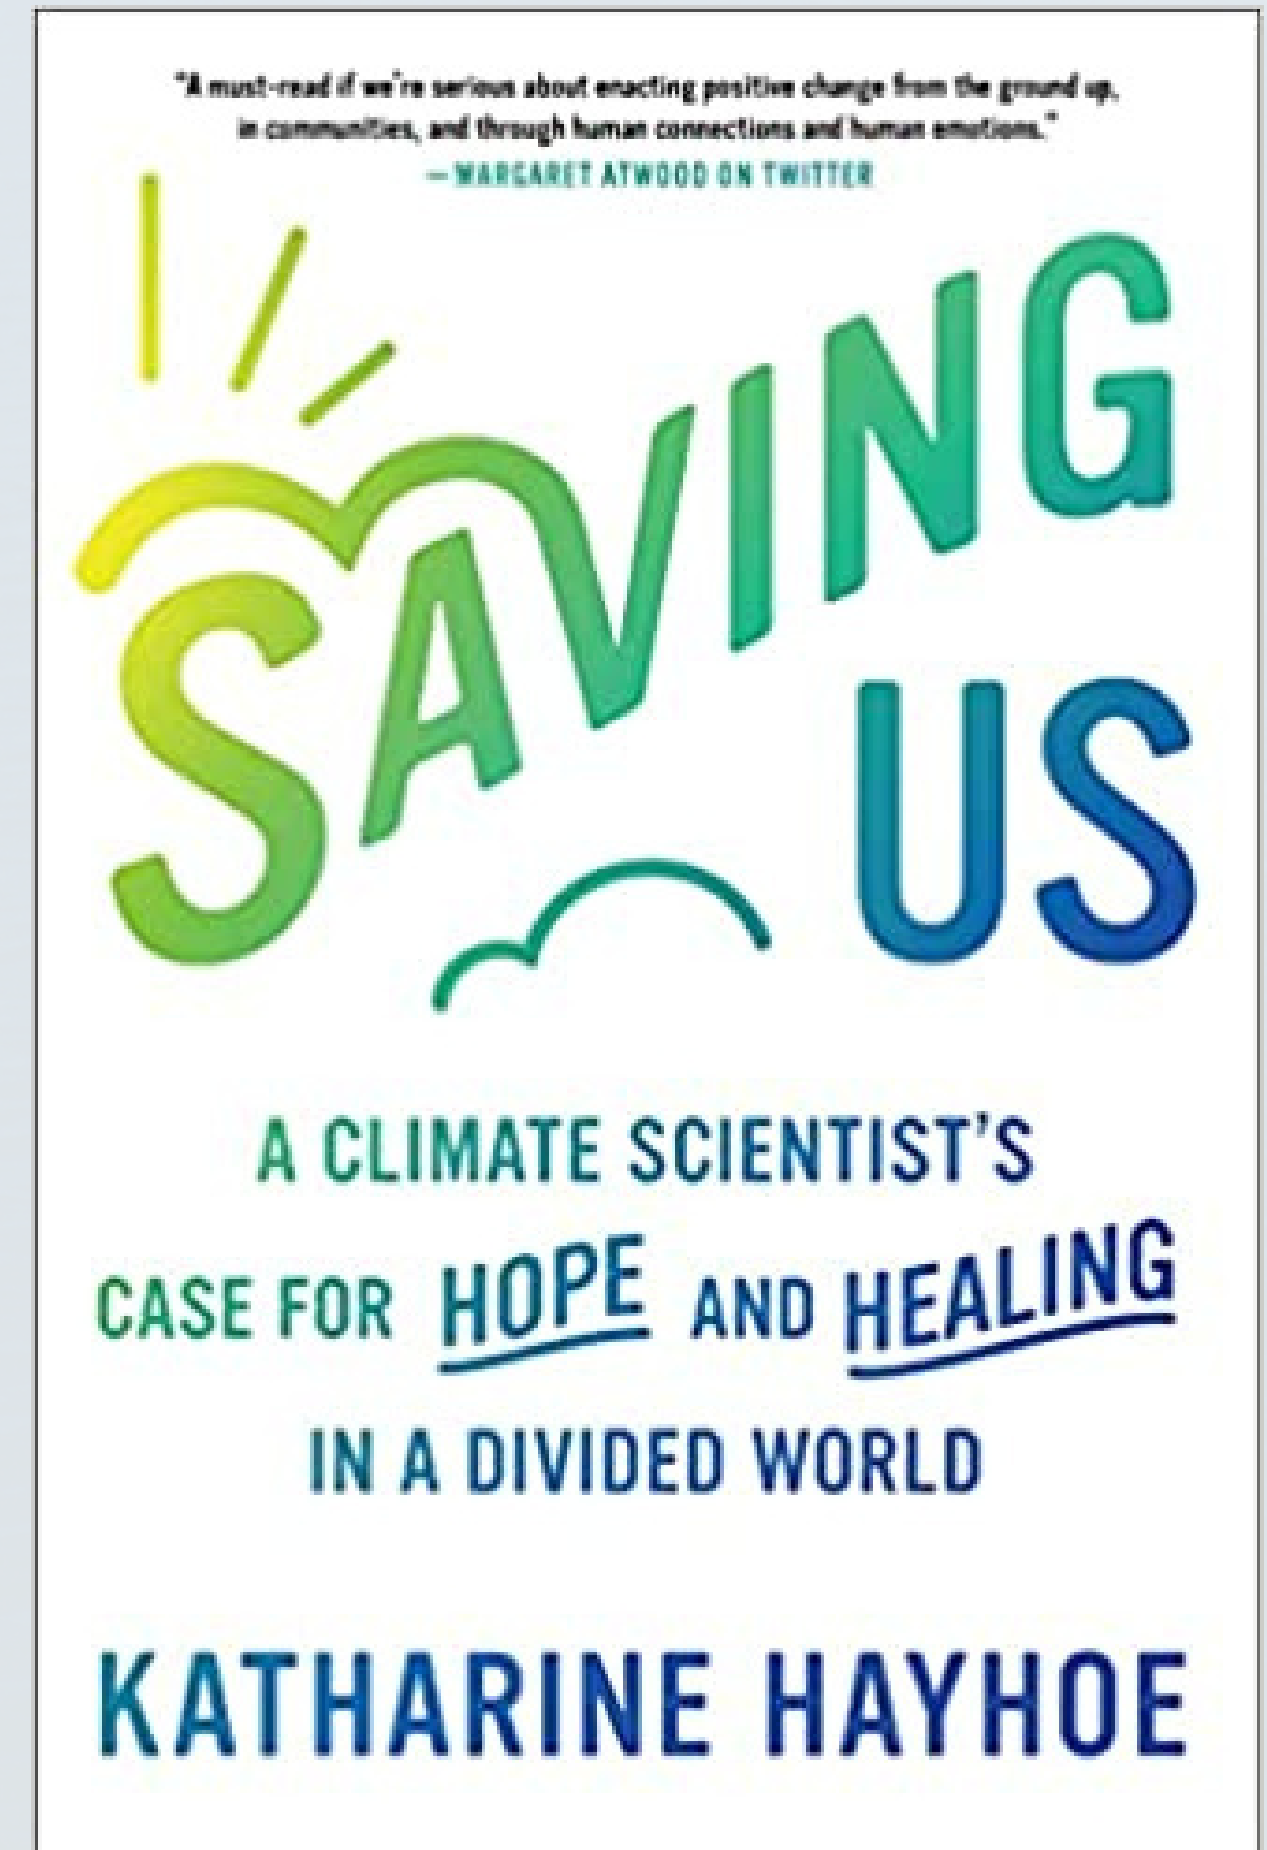

Funding from the Institute of Museum and Library Services

Project inspirations

"The most important thing you can do to fight climate change: talk about it."

- Katharine Hayhoe, Climate Scientist

Why talk about climate change?

"Individuals, communities, and societies come to understand, care and act on climate change through their communication with others."

- Yale Program on Climate Change Communication

The Future of Transportation in Belfast & Waldo County: Summary from 2/9/23

ABCD and the Belfast Climate Crisis Committee (CCC) hosted the fourth Community Climate Conversation on February 9, 2023. "The Future of Transportation in Belfast & Waldo County" event took place in the Abbott Room at the Belfast Free Library. 37 people attended in person and on Zoom.

We heard updates from two CCC members, and from the Belfast Pedestrian, Biking & Hiking Committee on their vision & priorities for Belfast.

Some takeaways & ideas from participants:

- It was thought-provoking and energizing to discuss a "culture shift" in the future of transportation - re-envisioning our habits and the ways we can provide a "diversity of mobility options" for everyone!

- The City of Belfast is in the process of applying for Maine's Community Resilience Partnership

Four U.S. banks - Bank of America, Citibank, Chase, Wells Fargo - lead the world in funding

"Rx for a Chaotic Climate: Healthy Soils" ~ Belfast Garden Club lecture on Tuesday 3/28

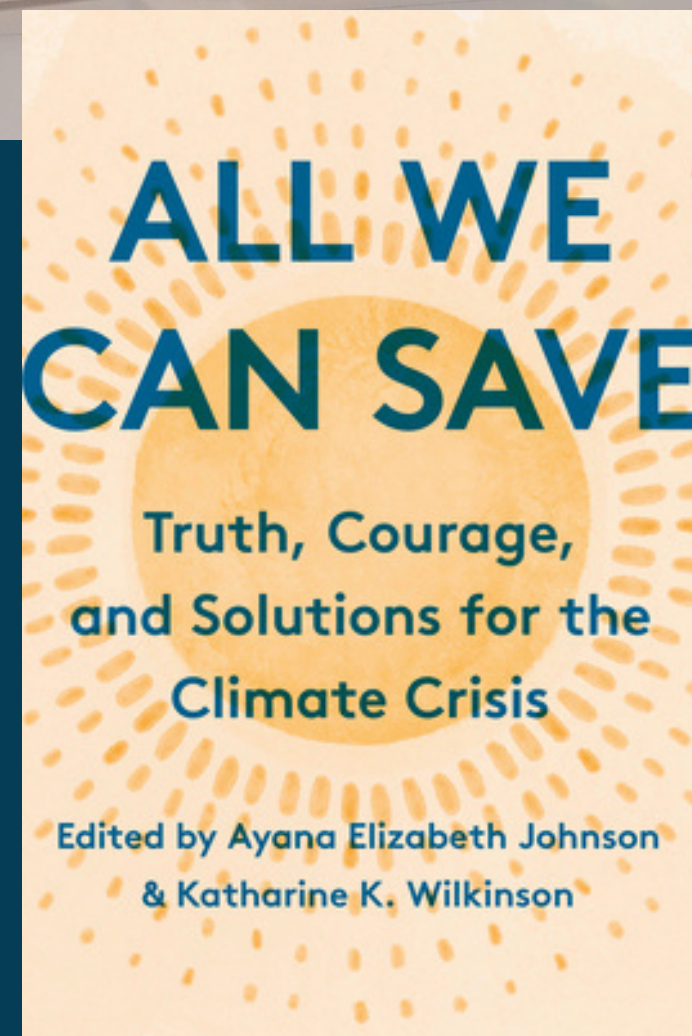

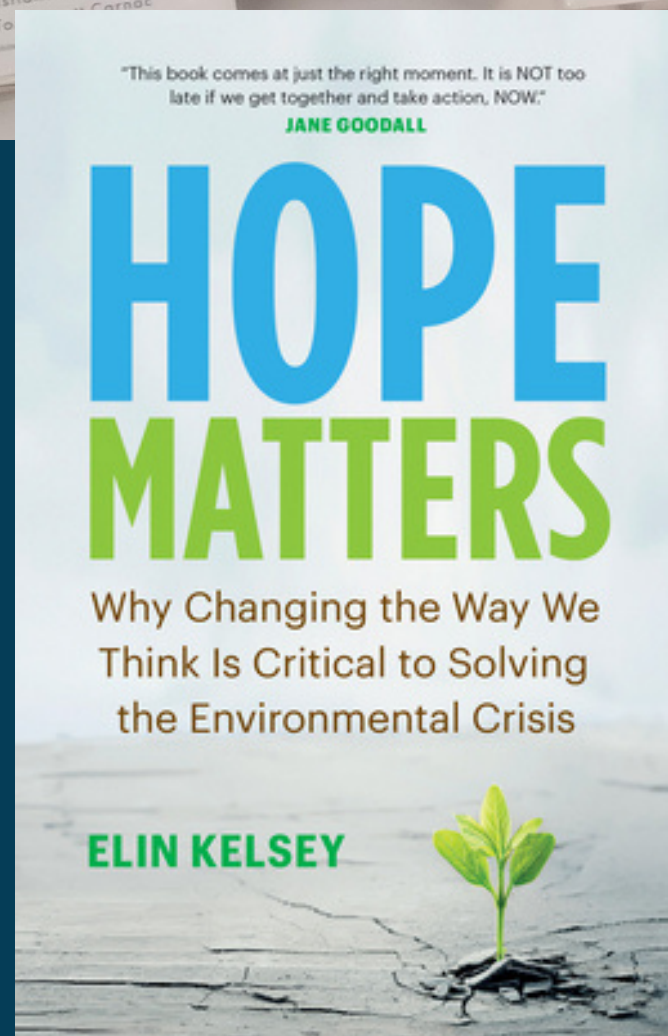

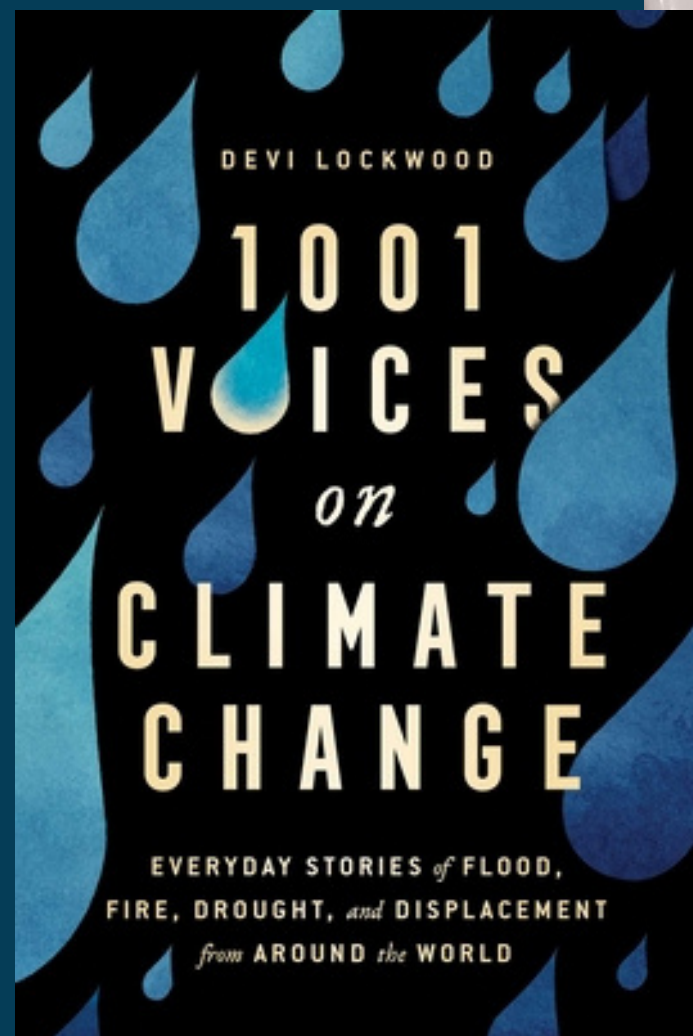

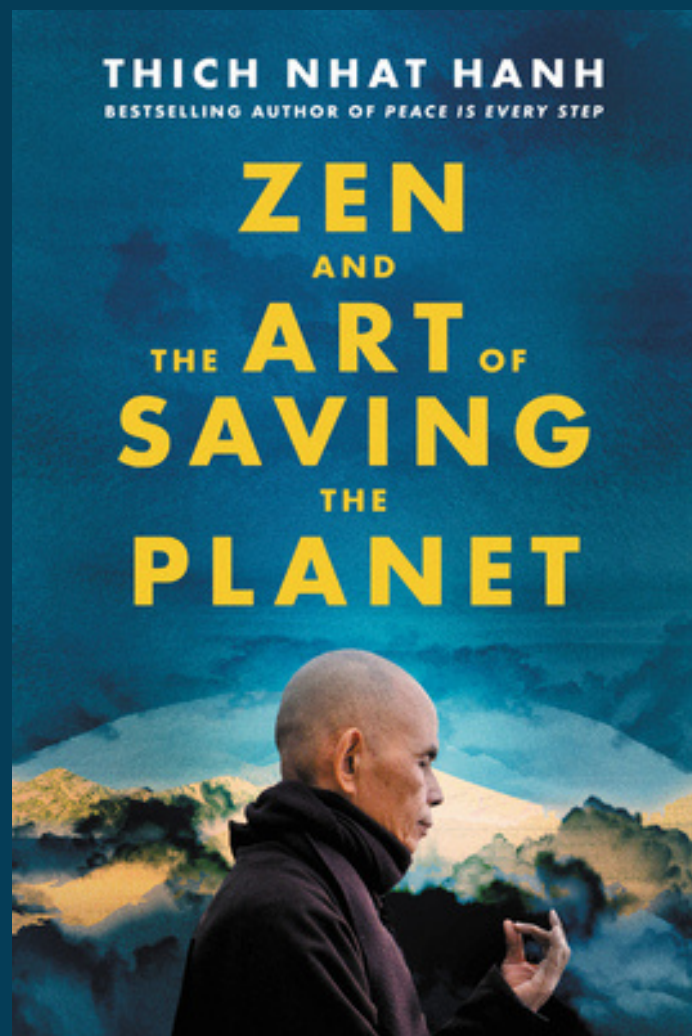

In recent years, Mainers have noticed chaotic weather patterns caused by climate change. State representative and soil scientist Laurie Osher will discuss practices that preserve and enhance soil organic matter to increase sequestration of carbon in soils. She will outline bills she's worked on to improve land management to decrease climate change impacts on our \$3.6 billion agricultural industry. She will speak about helping communities in Penobscot, Piscataquis and Aroostook counties obtain funding from the state so they can become more resilient to climate changes.

Ania Wright speaking at Maine Youth for Climate Justice youth press conference, June 2021

350 Maine's Youth Day of Action, 2019. Photo credit Susan Gatti

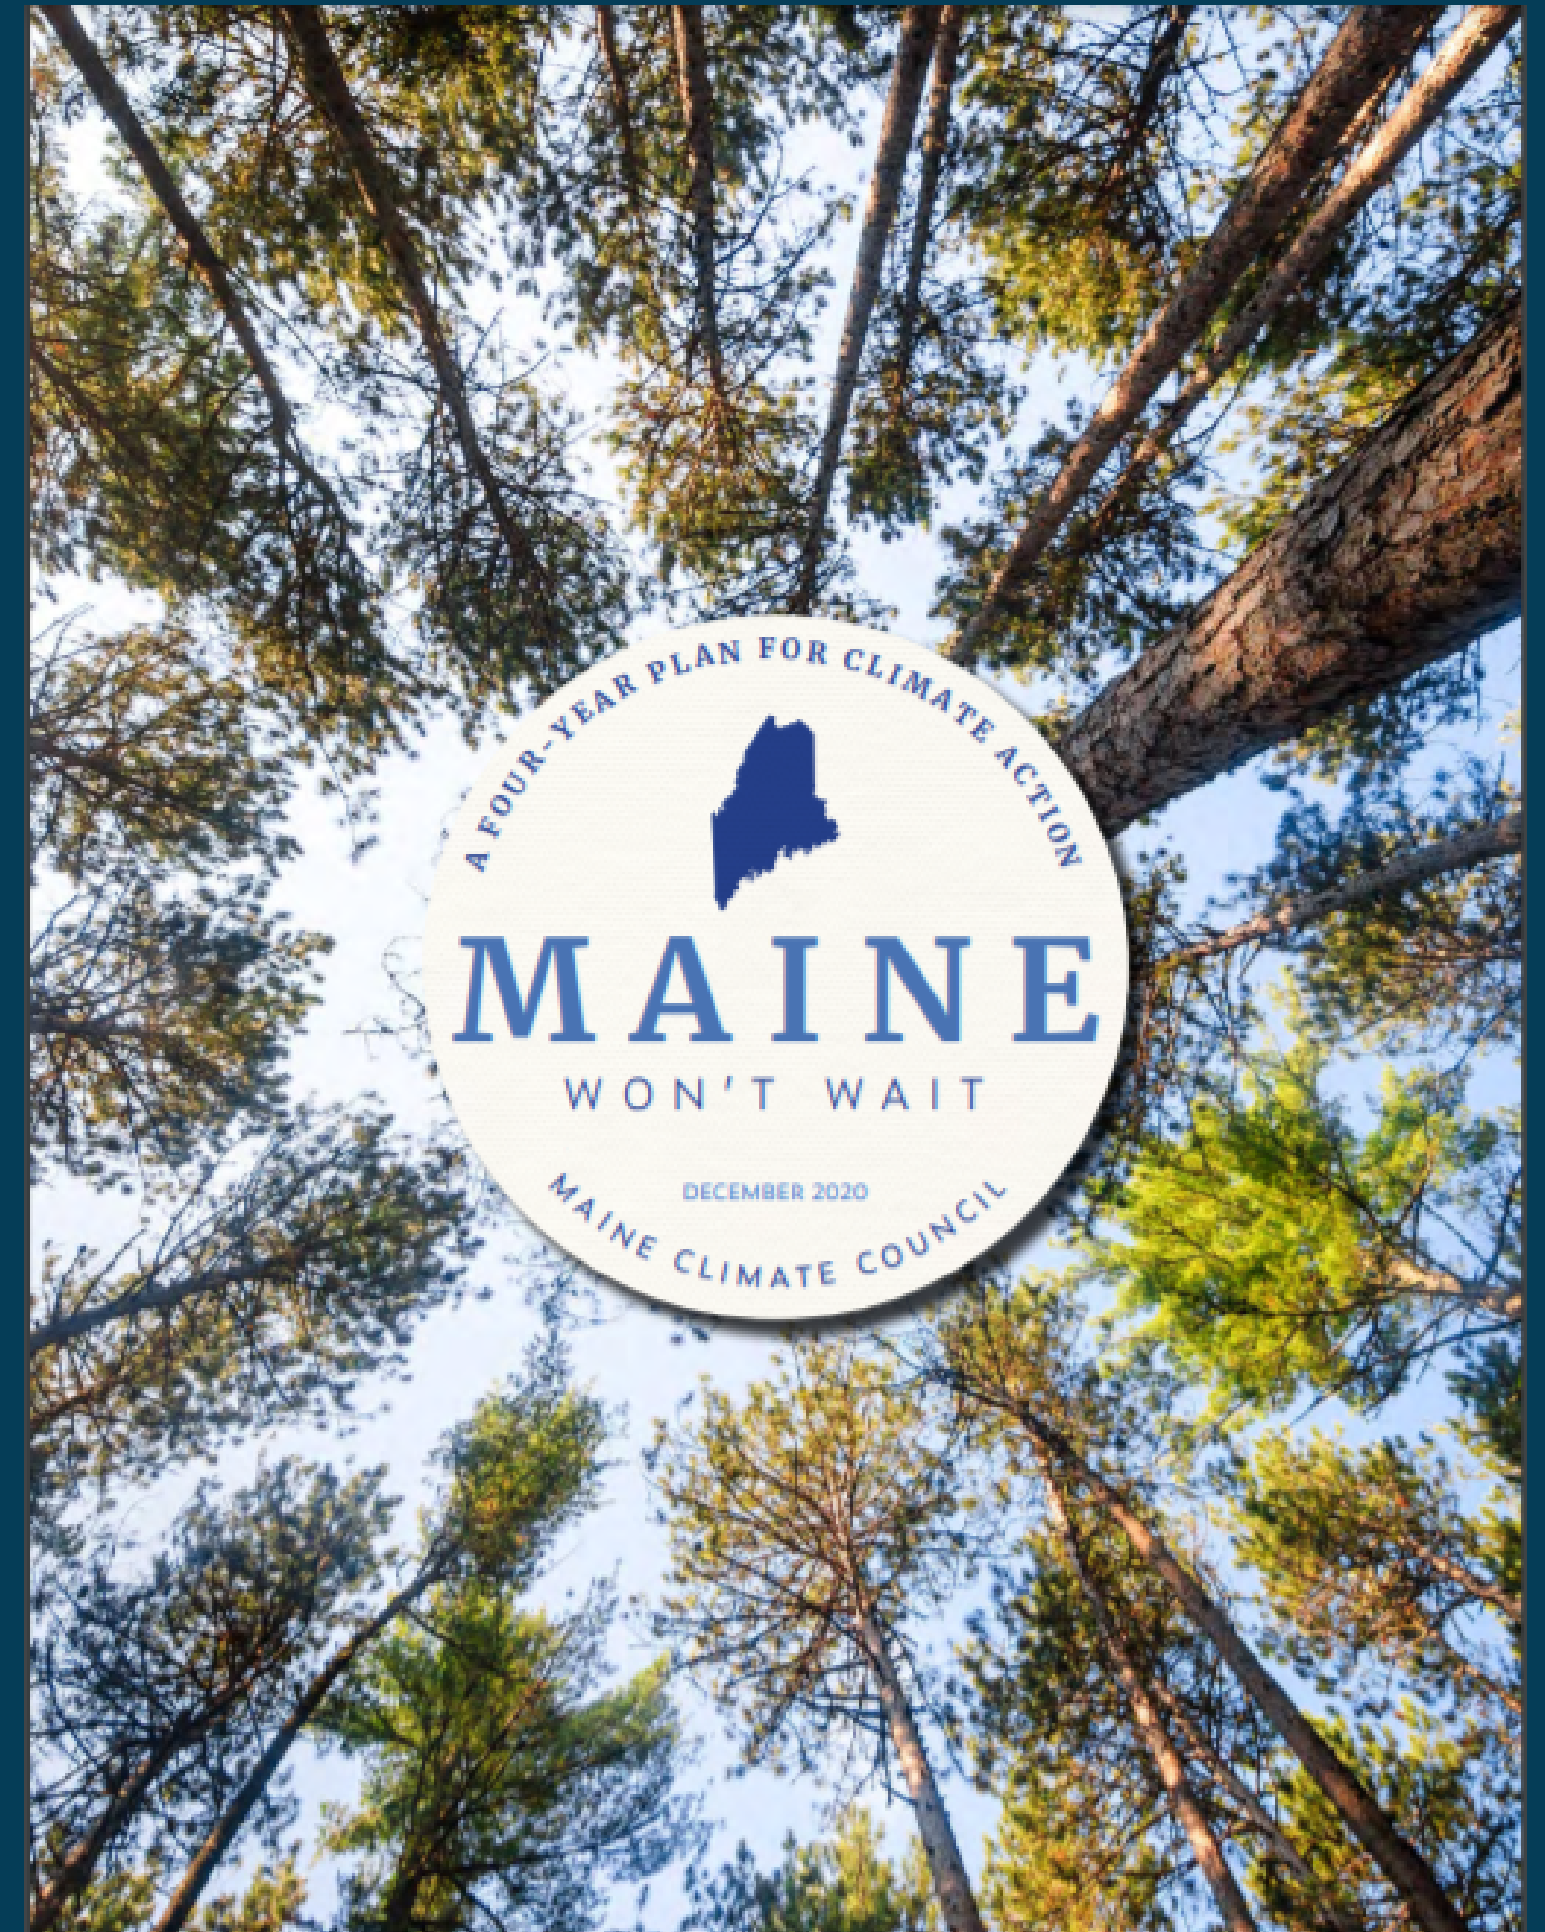

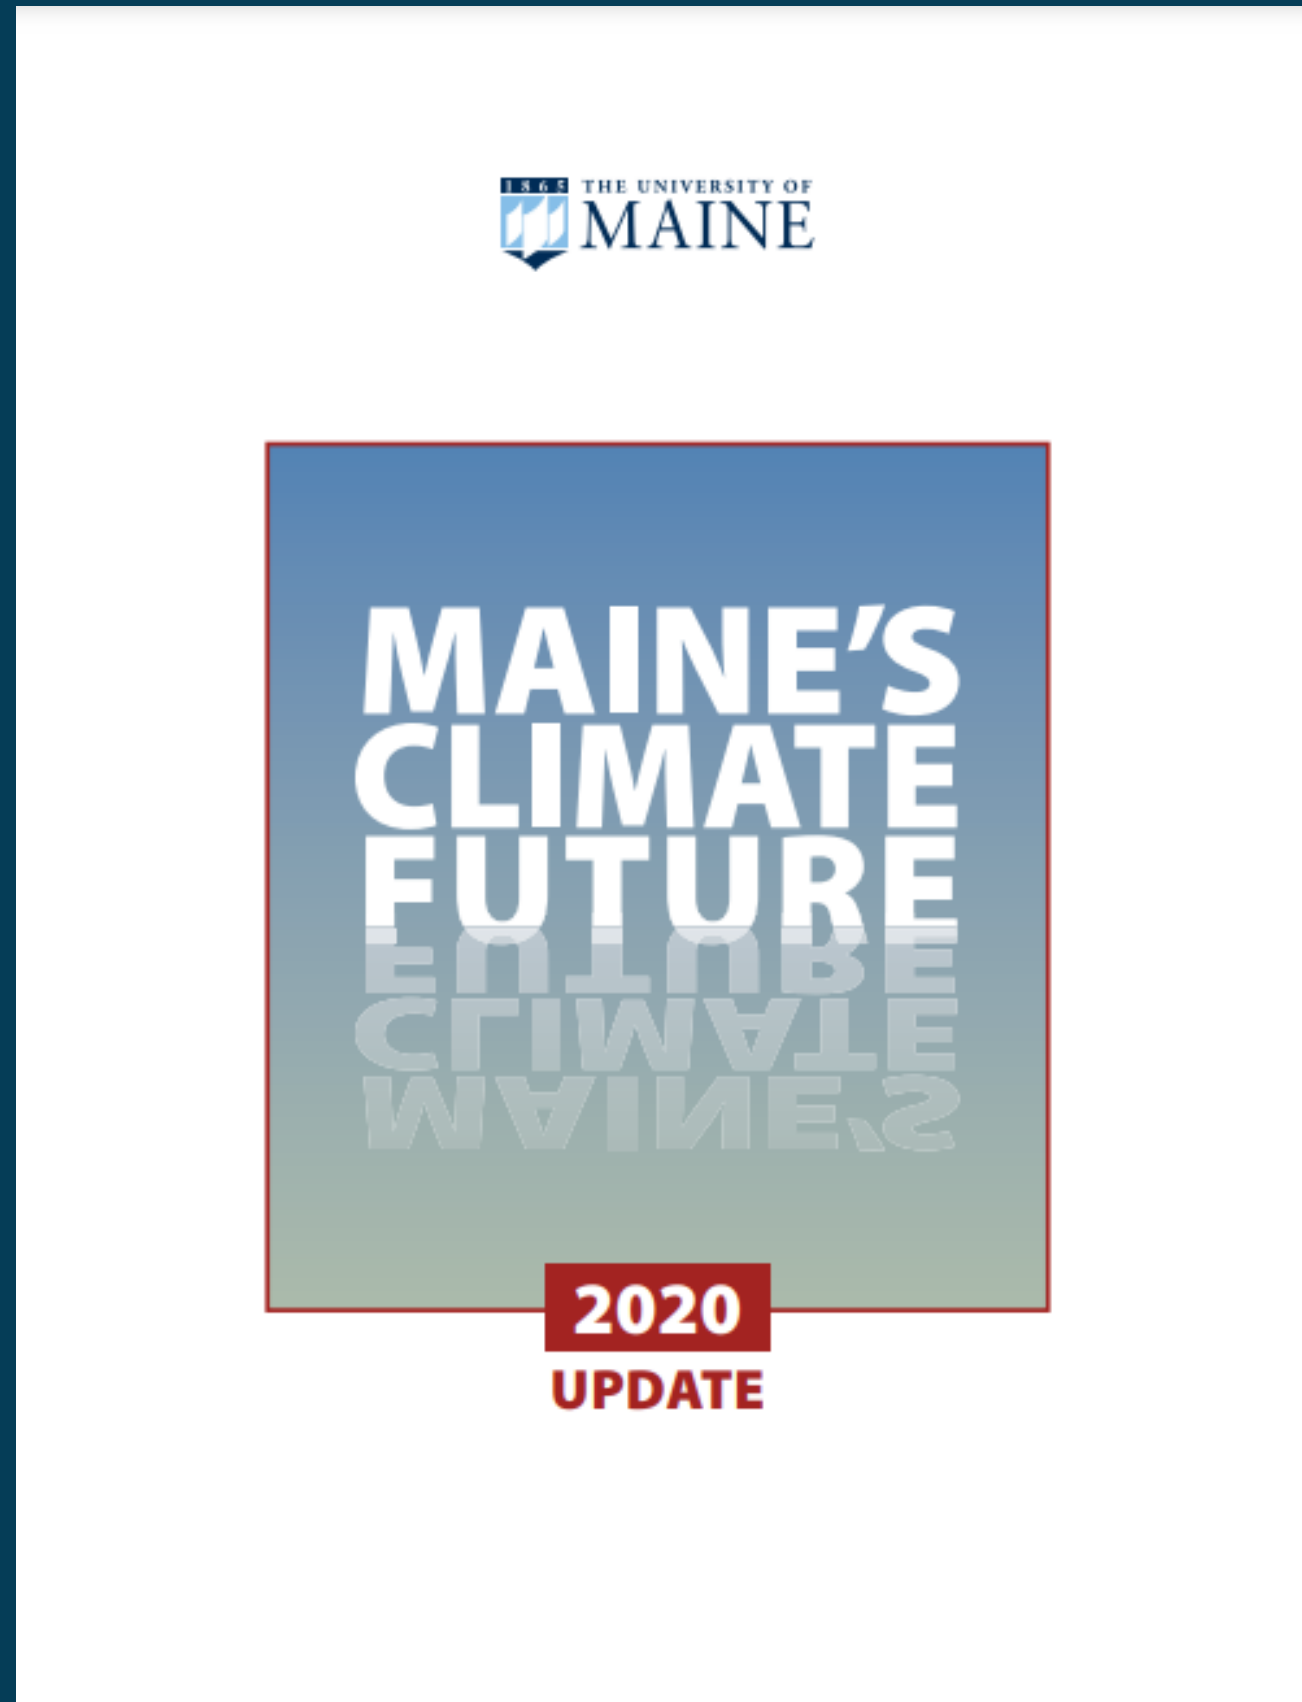

Groups like Seniors for Climate Action and Third Act are organizing to combat climate change. Photo from Seniors for Climate Change Facebook.

Driven at least in part by recognition that theirs are the lives that will be most impacted by climate change, young people are leading efforts to raise awareness and demand accountability and action from governments worldwide. Young activists like Greta Thunberg have successfully brought new attention to climate change and inspiring their peers and older generations. Organizations like [Earth Guardians](#) and the [Sunrise Movement](#) are dedicated to supporting and training young people to lead society towards a more sustainable and just future.

And youth aren't the only voices calling for change. Bill McKibben's [Third Act](#) makes a bold call to "experienced Americans" (e.g., those with 60 or more years of life) to contribute their knowledge and resources to protect our planet

Urban Forestry

Fred Bowers. Climate Crisis Committee. I've been thinking that if would be beneficial to devise an array of plants, from pollinators to shrubs, to large trees. These arrays could function as shade, carbon sequestration and also habitat. We could use some assistance to determine these arrays that are appropriate to the climate of now and the future. We could advise people to plant these arrays.

[Ripe Tomatoes in July?!](#)

[Where Are All the Bees?](#)

Misty Mallar, July 2021

Dickey Hill Farm
July 28 at 10:46 AM · 🌐

Spending some time internalizing that the climate crisis is impacting our farm in both more ways and more subtle ways than I anticipated. It is shallow breathing from wildfire smoke that has blown in from the West coast. It is the ten day forecast in the middle of summer with every high temp below the historic average after an unseasonably hot June. It is the unnerving feeling that crop planning and infrastructure adapting around seasonalities is going to be increasingly challenging.
