**EDITORIAL**

SYNTOPICON is a collection of topics and was first coined by Mortimer J. Adler, a professor and author at the University of Chicago, to describe the listing of topics discussed in Great Books of the Western World. We use the word as a pictorial collection of topics and events that happened at Lawrence Institute of Technology over the past year. We hope that if you were a part of Lawrence Institute this year, it will remind you of what you participated in. If you were not part of it, then maybe this book will give you an in-sight to life at Lawrence Institute.

This year is also the fortieth year of the founding of Lawrence Institute. The preceding page is a kodolith picture of the original College, which was started in Highland Park, in 1932. Today, we are in Southfield and we have a new future to look forward to and to build for. What we are in the future will be determined by what we do today. We can look back at the past and remember our history, but we can not live in it. To go ahead and move ahead into the future will take courage and stamina. Courage to remember past mistakes but not fear them; courage to make new mistakes and still survive. Stamina to not deter from our chosen course; stamina to withstand obstacles that seem insurmountable. We can see future trends or movements in business and industry, in the professions and in Society. We must be ready for these trends and movements, and the best way is by education. Therefore, if Lawrence Institute is prepared or can be prepared for this new and exciting future, it will have a great role.

## EDUCATION

In all profitable thinking about modern education one central fact is stated or assumed - the fact that education has become a public enterprise. .... Education is a common concern not merely because there are many children to be educated, but because there can be no significant outcome in the education of any child which is not of importance, not to him only, but also to others, immediately to many, more remotely to all. .... This has always been true. Modern life, with cities and the inventions which belittle time and space, has only made it more apparent and action upon it more pressing. No one can think with penetration upon the results of education who does not come at last to a fuller vision of the interdependence of men. That men shall live less and less each for himself, more and more each for the common good, is not merely a consequence of increasing numbers on the earth, but an essential condition of human progress, in the individual as well as in society. It is a poor and meager culture which does not end in greater power to serve. To become a man is to become capable of living effectively with others and for all, in the normal relationships of life -- not in subservience to custom, but in devotion to a welfare larger than one's own, a welfare at least not incompatible, in the end, with the welfare of the world. It is not enough to say that the common interest is at stake in the education of every child; the very process of education is properly a training for effective membership in the common life.

I found to be much as any other place in  
that it was what one made of it. At  
times I felt that many lacked a feeling of  
pride in the school reputation, maybe as  
time passes others to follow will feel  
different and the pride needed will de-  
velop as will the school. Lastly I would  
like to thank my wife, Judy, and all  
others who helped me through and over  
the rough spots."

terests: Drama, Music and Culinary Arts;  
College Comments: "I consider that  
mare is there for my use, not because I  
bought her, but because that is the  
natural order. It is more natural for a  
man to take a horse and use it as he likes,  
than for him to go down on his knees to  
it, begging it to do as it wishes, and to ful-  
fill its own marvelous nature." D. H.

# DR. EDWIN O. GRAEFFE

## A Memorial

The family, colleagues, graduates and former students of Lawrence Institute of Technology today pay tribute to Dr. Edwin O. Graeffe. His distinctive, booming voice cajoling, chiding, challenging, needling students will no longer be heard. In the silence comes the reflection of many, "If it hadn't been for 'Doc' I wouldn't have made it. He wouldn't let me quit."

Students enjoyed having him at their affairs. The alumni appreciated him. He was given honorary life membership in the L.I.T. Alumni Association.

Doctor Graeffe was a cosmopolitan figure, born in Belgium of a German father and an English mother. He earned advance degrees in international law at two German universities, Goettingen and Tuebingen. He travelled widely. He was well read. The sport of fencing caught his fancy. He bore the scars on both cheeks because he was ambidextrous. His enthusiasm for the sport was transmitted to the students he coached for ten years. He ardently followed other sports as well.

Stories, many stories, he told and retold, well. Even when he told the same story and people knew what was coming, they relished his telling it again.

Dr. Graeffe's concern for students and their success prompted him to work on an expansion of the curriculum which developed into the School of Industrial Management. He set the direction of that school on the L.I.T. campus.

We have recorded the 38 years Dr. Graeffe devoted to Lawrence Institute of Technology before his retirement. He served the College well from its beginning. His students will remember with affection the firmness and determination with which his counsel and encouragement were given. But it remains for the family to hold in memory the beloved husband, the respected father and the cherished brother. They will remember how much he gave himself to the cause of making Lawrence Institute of Technology a good College on its way to becoming great. We shall remember him well.
